Degafloor - the resin flooring specialist.

In today's demanding World, Degafloor is viewed as the standard to beat. After all, the need for hardwearing, reliable, innovative flooring systems that can be installed with minimal disruption has never been greater.

» It was the recognition of these changing demands that led our founder, who has worked in all kinds of flooring companies using every type of system, to develop and launch Degafloor. He studied the market closely and, importantly, talked to end users in every sector. Based on this initial insight and with a proven heritage, plus an established culture of innovation, we have been able to identify customer needs and bring solutions to market rapidly, resulting in our outstanding range of resin flooring systems for industrial and commercial use - a range now proven for many years.

All our resins are supplied by Evonik Industries AG (formerly Degussa AG), one of the world's largest chemical companies and no.1 in the supply of MMA resins to the global flooring industry. The Röhm GmbH & Co. division of Evonik who supply our resins, have also developed other ground-breaking technologies such as PLEXIGLAS®, EUDRAGIT® drug coatings, and ROHACELL® CFC-free hard foam.

» This world-leading expertise, along with extensive research and development resources, sturdily underpins Evonik's 40 years' experience of producing high quality resins for a wide range of business sectors. We recognised in each other the same understanding of the intricacies and challenges of flooring technologies and the same desire to find solutions.

This partnership, backed by our unbeatable experience, continues to deliver proven products that you can trust. As a result, today our customers include major supermarkets, major food processors, top football clubs, and leading pub and nightclub groups amongst many, many others.

A perfect fit.

Over many years Degafloor has developed a reputation built on quality products, professional service and value for money.

» But, of course, the quality of installation is central to that reputation. That's why our installation partners are stringently selected for their professionalism and experience in using reactive resins and, in particular, MMAs.

Based throughout the UK and Ireland, this select group of experts provide us with a truly nationwide reach. So, wherever your site, you can be sure there's a Degafloor partner on hand to provide the best possible advice.

This combination of product excellence, the capability of our partners and our own vast in-house technical knowledge means you can trust and rely on us totally. From raw material to installation and post-sales support, unbeatable experience based on customer service is embedded into every stage.

Why should you stand for anything less?

Down fast. Designed to last.

Degafloor grew out of our knowledge of the flooring market. We identified with the need for maximum performance and minimum downtime - and, in creating Degafloor, we identified the perfect solution, too.

» So our strongest proposition is not a technical feature (though there are many) but a business benefit: unequalled speed of cure. Because we understand how expensive and disruptive downtime can be, our systems are capable of being installed at any temperature between 35 degrees C and -30 degrees C, and they all cure fully within just two hours of installation. It makes Degafloor the fastest cure for both new build and refurbishment projects.

Our installation partners make it their business to deliver the perfect Degafloor system to meet your specific needs. Whether you need hygienic, durable and slip-resistant or decorative and impermeable characteristics, that's exactly what you'll get. We can also create highly innovative aesthetics in line with specific project requirements, as well as a Class 0 Fire rated variant.

Down fast. Designed to last.

Through delivering a long, maintenance free working life, we're determined to offer best value.

- » Tough, safe and attractive, Degafloor is resistant to UV light and weathering, and provides an exceptional bond to concrete, steel, marine ply and tiles. An inseparable chemical bond between layers creates a truly monolithic floor that can withstand the demands of heavy industry or constant foot traffic, and is easy to clean and repair. For extra peace of mind, we also offer bespoke warranties.

We aim to provide real lifetime value rather than the lowest first fit cost. This is well proven through our work for public sector clients including schools and prisons - but applies equally to every single client. Outstanding durability, strength of bond to substrates and ease of repair and overcoating mean that a Degafloor installation delivers a floor for life - capable of being transformed to a new look or texture without needing to remove the existing finish.

As we see it, we're not just providing a floor, but a long term business asset.

Clients who won't stand for anything less than the best.

Every single Degafloor installation meets different criteria, and responds to different needs. Before we formulate a solution, we talk closely to our clients, so we can provide a tailor-made response.

» Every client is different, and the range of solutions we are able to deliver is limited only by imagination. We are always trying to offer the customer something new, exciting and different - a key requirement of the leisure industry, for instance. Degafloor is inherently versatile, so we can originate innovative finishes and bespoke designs. The evidence can be found in many of our leisure industry installations, including Hamilton Palace, Regent Inns (Walkabout Bars, Bar Risa and Jingleurs) and The Penthouse in London.

Where performance standards are concerned, no-one is more discriminating than the food industry. With clients like Bakkavor (formerly GEEST plc), Grampian Country Food Group and Kerry Foods, we've provided impartial advice on criteria like slip resistance and the risk of food taint - meaning they can make an informed choice on the pros and cons of the available solutions. This sort of service gives us unequalled credibility.

It's our spirit of innovation and unrivalled product performance that positions Degafloor firmly as pioneers in the future of flooring.

Serving customers,
solving problems.

Understanding customers'
problems and delivering
solutions is at the heart
of Degafloor's service.
In a word, flexibility.

» In conjunction with our installation partners, we study the situation on site - the type of substrate the floor will be laid on, the amount and nature of traffic expected, the kind of environment, the cleaning methods - before delivering a tailored solution. So, rather than just supplying a floor, we provide long term solutions to customer problems and challenges.

Colours, surface finishes, installation requirements, post sales support - you specify it, we'll deliver it. We listen before we act, and we do not dictate.

No business sector is as diverse as retail, and we have never failed to meet the needs of blue chip clients like Center Parcs, Co-op, IKEA and the major food retailers.

Serving customers, solving problems.

» In retail alone, there is in excess of 250,000 sq metres of installed Degafloor systems working hard for clients every day.

We're also fanatical about customer care and this guides our day-to-day activity. We provide an unrivalled level of customer support, both pre- and post-installation, that defines the brand and separates us from the competition. Clarity of focus (we only supply MMA resin flooring solutions) enables us to meet the real and demanding challenges of today's business environments.

So by choosing Degafloor, you don't just get a floor - you get an innovative solution, unrivalled specification and dedicated people who care.
